Construction begins this summer on the King County Wastewater Treatment Division's Eastgate Interceptor Lining Project

Beginning early this summer, work will begin on the Eastgate Interceptor Lining Project in three areas of Bellevue (see map on back). This work is part of the conveyance system program created to rehabilitate corroded conveyance pipelines throughout the county's regional wastewater system.

The project involves:

- Interior lining of approximately 3,000 feet of sewer pipeline. Most of the work will be below-ground, though there will be surface work at manholes where the lining is inserted and terminated.
- Prior to the lining work, the contractor will take pipe measurements, and clean and videotape the pipes. This work is tentatively scheduled for mid- to late-May.
- Lining of 17 manholes to protect against further corrosion.
- Traffic control, including detours and one temporary street closure.
- Short-term overnight work: once started, lining work is continuous until the lining is in place and cured. Besides noise and lights, you may notice an odor from the resin curing (hardening) process.
- Temporary by-pass and pumping of sewer flows around the work area so the pipe can be dry and cleaned before lining. In some cases, by-pass lines and equipment will be placed along the street.
- All disturbed areas will be restored.

The work will be taking place at three different locations (see map on back):

- At SE Eastgate Way and 161st Ave SE: a sewer bypass line will cross under the intersection. Work will extend about 250 feet north along 161st Ave. NE, with a bypass line extending further north. A lane closure along 161st Ave SE is anticipated.
- Lining and bypass work running south from SE 24th Street approximately 1,100 feet along 158th Ave SE. Work will also take place along shorter stretches (approx. 250 feet) of SE 24th Street and 157th Place SE.
- Work along a 500 foot stretch of 154th Ave. SE, running south from Lake Hills Blvd.
- Additionally, there will be a project staging area located on City of Bellevue park property, near the corner of 160th Ave. SE and SE 30th Place.

Location map and contact information on back.

Keep you informed about the project

We want you to be aware of this future work. We will send out additional project details and schedule information when available. Wherever possible, King County will try to minimize construction impacts and keep people informed about our work.
